

**Version 1.0** Used at time of registration of all patients who experience an acute stroke on 1 January 2010 onwards

## **Riks-Stroke questions relating to occupational therapy**

**Personal ID number** |\_\_|\_\_|\_\_|\_\_|\_\_|\_\_| - |\_\_|\_\_|\_\_|\_\_|

**Name** .....

**Gender** 1= male 2= female |\_\_|

**1. Has an occupational therapist evaluated the patient since he/she arrived at the treatment ward?** |\_\_|

The evaluation should be based on a face-to-face meeting with the patient after arrival at the ward. Treatment ward does not include emergency department.

**1** = yes, ≤ 24 hrs

**2** = yes, > 24 hrs but ≤ 48 hrs

**3** = yes, > 48 hrs

**5** = no

**9** = not known

**2. Has the patient received occupational therapy?** |\_\_|

Answer refers to the total time spent in occupational therapy on average per day, calculated over five of the seven days of the week during the part of the treatment time that the patient is considered having had a need for occupational therapy. For treatment periods of less than five days, the answer always refers to the time on average per day calculated over the actual treatment time. Definition of occupational therapy: occupational therapeutic evaluation/treatment that is carried out by an occupational therapy assistant following transfer of tasks.

**1** =yes, ≥ 45 min

**2** = yes, < 45 min

**3** = no, but there was a need

**4** = no, no need

**9** = not known
