

Version **2.0** Used at time of registration of all patients who experience an acute stroke on **1 January 2010** onwards

## Riks-Stroke questions relating to physiotherapy

Personal ID number       -

Name .....

Gender 1= male 2= female

### 1. Has a physiotherapist evaluated the patient?

Answer relates to the time after arrival at the ward. Treatment ward does not include emergency department. The evaluation should be based on a face-to-face meeting.

**1** = yes, ≤ 24 hrs

**2** = yes, > 24 hrs but ≤ 48 hrs

**3** = yes, > 48 hrs

**5** = no

**9** = not known

### 2. Has the patient received physiotherapy?

Answer refers to the total time spent in physiotherapy on average per day, calculated over five of the seven days of the week during the part of the treatment time that the patient is considered having had a need for physiotherapy. For treatment periods of less than five days, the answer always refers to the time on average per day calculated over the actual treatment time.

Physiotherapy refers to evaluation/treatment that is carried out by a physiotherapist or physiotherapy assistant following transfer of tasks from the physiotherapist.

**1** = yes, ≥ 45 min

**2** = yes, < 45 min

**3** = no, but there was a need

**4** = no, no need

**9** = not known
